During their season these give more flowers and a greater display than any other roses grown. Is the porch sunny and bare? Climbing roses provide both shade and beauty. Is there an arbor you wish to beautify? Use roses. Have you an unsightly fence? Ramblers make the prettiest fence imaginable. Have you a view you wish to screen? A trellis with roses will make your screen a thing of beauty. Is there a rough or stony slope you wish to beautify? Cover it with ramblers. Do you want an arched entrance to the rose garden? What can be more appropriate or give so much for so little invested?

Shade Trees Beautify the Lawn

SHADE TREES SHIPPED EXPRESS OR TRUCK FREIGHT UNLESS OTHERWISE NOTED.

A broad open space of well kept lawn is the first essential of good landscape design, the base against which all else is viewed. Yet it is incomplete without trees to shield the house from the direct heat of the sun, and for ornament. Without trees as a background so the topmost branches extend above and break the roof lines, and a few toward the ends to frame the view, the house appears lost in space. Once established, nothing will increase in value and give such good results with so little attention as shade trees.

Peach Trees

Peaches come into bearing younger than any other tree fruit, under favorable conditions, giving a crop the third year, and yields are larger as the trees grow older. A few trees won't cost as much as you may pay for peaches in one year, and none are as delicious as those freshly picked when ripened on the tree. The man who has

room for a commercial orchard, and will cultivate, prune and take care of the trees, peaches offer great opportunities for great profits. A sandy loam or gravelly soil is best, but the peach adapts itself to almost any well drained soil.

STRAWBERRIES

STRAWBERRY PLANTS ARE GROWN UNDER IRRIGATION AT SARCOXIE

All varieties listed are perfect flowered and will bear alone.
